SUMMARY

B.Tech graduate in Computer Science (Data Science, 2025) with project-proven skills in Python, SQL, Django, and data analysis. Shipped a full-stack ATS Resume Analyzer with NLP-based scoring and a sales dashboard that surfaced actionable KPIs from raw transactional data. Equally comfortable writing backend APIs and running exploratory analysis — seeking an entry-level Data Analyst or Python Developer role where both skill sets are valued.

EDUCATION

B.Tech in Computer Science & Engineering (Data Science) (2021 – 2025)

Santhiram Engineering College, Nandyal, Andhra Pradesh | CGPA: 7.72

Intermediate (MPC) 2021

Nucleus Junior College, Nandyal | Percentage : 88%

TECHNICAL SKILLS

Programming: Python, SQL, object-oriented programming

Data Analysis & Visualization: Pandas, NumPy, Exploratory Data Analysis (EDA), statistical analysis, Matplotlib,

Power BI, MS Excel, data cleaning, data wrangling

Databases: MySQL, database management

Machine Learning & AI: Scikit-learn, Linear Regression, Logistic Regression

Web Technologies & Frameworks: Django, RESTful APIs, HTML, CSS, JavaScript, backend development

Tools & Platforms: Git, GitHub, Linux, AWS

PROJECTS

Pizza Sales Analysis Dashboard

Tech Stack: SQL, Excel

- Extracted and transformed 12,000+ rows of raw sales data using 15+ SQL queries to calculate KPIs including total revenue, average order value, and order frequency by time slot.
- Engineered an interactive Excel dashboard with Pivot Tables, dynamic slicers, and charts that reduced manual reporting time by eliminating ad-hoc query requests.
- Identified 3 peak revenue time slots and top 5 best-selling products, enabling data-driven decisions around staffing and inventory planning.
- Applied statistical analysis to surface a 22% revenue concentration in weekend evening orders, flagged as a key business insight.

ATS Resume Analyzer & Job Skill Matcher | [GitHub](#)

Tech Stack : Python, Django, HTML, CSS, JavaScript, Git

- Architected a full-stack ATS Resume Analyzer using Django and JavaScript that evaluates resumes against job descriptions, processing uploads in under 2 seconds end-to-end.
- Built NLP pipelines for automated skill extraction from unstructured resume text, achieving approximately 85% keyword match accuracy against test job descriptions.
- Designed a scoring algorithm to calculate ATS match percentage across 50+ skill categories, returning matched skills, missing skills, and ranked improvement suggestions.
- Exposed all processing logic via RESTful APIs with 4 endpoints covering resume upload, skill extraction, scoring, and result retrieval.
- Integrated frontend and backend for seamless single-page analysis, reducing manual resume screening effort significantly.

AI-Powered IT Support Chatbot | [GitHub](#)

Tech Stack : Python, Django, HTML, CSS, Git

- Developed a web-based IT support chatbot using Django that automates resolution of 12 common technical issue categories including network, authentication, and system performance.
- Implemented a rule-based keyword detection engine covering 60+ trigger phrases, routing user queries to pre-built solution flows with zero manual intervention.
- Built a fully responsive UI using HTML and CSS, tested across 3 screen sizes to ensure consistent experience on desktop and mobile.
- Reduced average support resolution time by eliminating escalation for high-frequency, low-complexity issues — handling approximately 80% of common query types autonomously.
